

#### 4. CONSISTENCY OF INFORMATIONAL PACKAGES

The information contained in the feedback structures can be packaged so that it gives consistency on all levels of packaging. It is essential to check the consistency of two different ways in order to obtain confirmation of the correctness of the approach.

On the semantic side one can discover consistency through the human experience that recognizes patterns. Taking into account the existing human mind map recognition means human validation. On the other hand, consistency is recognized when semantic packaging is optimized.

An example in this direction is the following:

[illegible]

Fig. 1 optimized table of colored fields

The optimized table of colored fields contains various sub-tables. The relationships between them are complex, but recognizable if we use semantics.

The tables below are even the optimized colored field tables in Fig. 1
